Notes:
1 - Assumes Floor Surface area is 25% of Single-Family Residential acreage, 50% of Multi-Family Residential acreage, and 20% of school acreage. Square footage rounded to nearest thousand.
2 - Based on estimate of 2.64 people per household from the Specific Plan dated February 2015.
3 - Includes allocated units under Low Density Residential (LDR), Medium Density Residential (MDR), and Urban Reserve (UR) land uses per the land use plan dated 5/4/2015.
4 - Includes acreage from LDR, MDR, street crossing, and 50% of Misc. Roads per the land use plan dated 5/4/2015.
5 - Includes allocated units under High Density Residential (HDR) and Community Commercial-Village Center (CMU-SA) land uses per the land use plan dated 5/4/2015.
6 - Includes acreage from HDR and 50% of Misc. Roads per the land use plan dated 5/4/2015.
7 - Based on assumptions in Fehr & Peers Amoruso Ranch Draft Traffic Study dated April 17, 2015; Table 11. The 27.2-acre Village Center (CMU-SA) is assumed to consist of 15% office and 85% retail, which yields 34 ksf office and 204 ksf retail. Although the 23.85-acre Community Commercial (CC) parcel may permit a mix of retail and office, a worst-case assumption of 100% retail 238 KSF was assumed. Typical elementary school size and attendance assumed.
8 - Includes acreage from 85% of the 27.2-acre Village Center (CMU-SA) parcels, 100% of the 23.85-acre Community Commercial, 100% Parks and Recreation (PR), and Public/Quasi Public (P/QP) not including the school per the land use plan dated 5/4/2015.

10 Includes acreage from P/QP School per the land use plan dated 5/4/2015.
11 Does not include NAPOTs, Open Space, or Urban Reserve. Urban Reserve acreage not included as the grading needed for one house would be insignificant.

Recommended Mitigation

The following mitigation measures are quantified within the CalEEMod and shall be implemented to reduce air quality impacts:

MM 4.4-1 Measures to Reduce Short-term Construction Related Emissions (Impact 4.4-1)

The following mitigation measures shall be implemented to reduce short-term construction-related air quality impacts.

a. Prior to approval of Grading or Improvement Plans, (whichever occurs first), on project sites greater than five acres, the Applicant shall submit to PCAPCD a Construction Emission / Dust Control Plan within 30 days prior to groundbreaking. If the PCAPCD does not respond within 20 days, the plan shall be considered approved. The applicant shall provide written evidence, provided by the PCAPCD, to the City that the plan has been submitted to PCAPCD. It is the responsibility of the Applicant to deliver the approved plan to the local jurisdiction. The applicant shall not break ground prior to receiving District approval of the Construction Emission / Dust Control Plan, and delivering that approval to the local jurisdiction issuing the permit, unless the PCAPCD does not respond within 20 days of submission of the plan, and the plan is deemed approved.

b. The following shall be included in the Dust Control Plan:

- During construction, emissions of fugitive dust from any active operation, open storage pile, or disturbed surface area, shall be controlled so that dust does not remain visible in the atmosphere beyond the boundary line of the emission source.
- When wind speeds result in dust emissions crossing the property line, and despite the application of dust control measures, grading and earthmoving operations shall be suspended and inactive disturbed surface areas shall be stabilized.
- Fugitive dust generated by active operations, open storage piles, or from a disturbed surface area shall not result in such opacity as to obscure an observer's view to a degree equal to or greater than does smoke as dark or darker in shade as that designated as No. 2 on the Ringlemann Chart (or 40 percent opacity).
- All exposed soils be watered a minimum of once every two hours of active operation or sufficiently often to keep the area adequately wetted.
- Any visible track-out on a paved road where vehicles enter and exit the work area must be removed at the end of the workday or at least on time per day. Removal shall be accomplished by using wet sweeping or a HEPA filter equipped vacuum device. Dirt from vehicles exiting shall be removed through the use of a gravel pad, a tire shaker, a wheel wash system, or a pavement extending for not less than 50 feet from the intersection with the paved public road.

c. Include the following standard note on the Grading or Improvement Plan: The prime contractor shall submit to the District a comprehensive inventory (i.e., make, model, year, emission rating) of all the heavy-duty off-road equipment (50 horsepower or greater) that will be used in aggregate of 40 or more hours for the construction project. If any new equipment is added after submission of the inventory, the prime contractor shall contact the PCAPCD prior to the new equipment being utilized. At least three business days prior to the use of subject heavy-duty off road equipment, the project representative shall provide the District with the anticipated construction timeline including start date, name and phone number of the property owner, project manager and on-site foreman.

d. Prior to approval of Grading or Improvement Plans, whichever occurs first, the applicant shall provide a written calculation to the PCAPCD for approval by the District demonstrating that the heavy-duty (50 horsepower or greater) off-road vehicles to be used in the construction project, including owned, leased and subcontractor vehicles, will achieve a project wide fleet-average 20 percent NOx reduction and 45 percent particulate reduction as required by CARB. Acceptable options for reducing emissions may include use of late model engines, low-emission diesel products, alternative fuels, engine retrofit technology, after-treatment products, and/or other options as they become available.

e. In order to control dust, operational watering trucks shall be on-site during construction hours. In addition, dry, mechanical sweeping is prohibited. Watering of a construction site shall be carried out in compliance with all pertinent PCAPCD rules (or as required by ordinance within each local jurisdiction).

f. Include the following standard notes on the Improvement/Grading Plan:

   - During construction the contractor shall utilize existing power sources (e.g., power poles) or clean fuel (i.e. gasoline, biodiesel, natural gas) generators rather than temporary diesel power generators.
   - During construction the contractor shall minimize idling time to a maximum of 5 minutes for all diesel-powered equipment.

g. Signs shall be posted in the designated queing areas of the construction site to remind off-road equipment operators that idling time is limited to a maximum of 5 minutes.

MM 4.4-2 Project Measures to Reduce Operational Emissions (Impact 4.4-2 and 4.4-7)

Following receipt of an application for a Tentative Map (excluding the Large Lot Subdivision Map), Design Review Permit, conditional use permits and/or any other discretionary permits, the City will forward an early consultation notice to the PCAPCD. Where the PCAPCD provides comments on a specific development proposal, the City shall consult with PCAPCD and the developer to incorporate measures recommended by the PCAPCD and agreed to by the City into the project. Where the PCAPCD does not provide comment on a specific development proposal, the City shall incorporate measures that reduce vehicle emissions and operation emissions from the proposed development. This measure will be implemented through project design, conditions of approval, noticing and disclosure statements, or through the City's plan check and inspection processes. This process is intended to ensure that best available and practical approaches are used to reduce operational emissions in specific tentative map and design review permit applications. The following is a listing of measures that shall be implemented for the purpose of reducing vehicle and operational emissions, unless the applicant provides an analysis that demonstrates to the City's satisfaction that the measure is infeasible or other measure is comparably effective. If the applicant demonstrates that any particular measure in the list below is infeasible for a proposed project to which it would otherwise be applicable, the applicant must provide an analysis supported by substantial evidence demonstrating that a replacement measure is comparably effective.

- Provide tree plantings that meet or exceed the requirements of the City's Community Design Guidelines to provide shading of buildings and parking lots.
- Landscape with native drought-resistant plants (ground covers, shrubs and trees) with particular consideration of plantings that are not reliant on gas-powered landscape maintenance equipment.
- Require all flat roofs on non-residential structures to have a white or silver cap sheet to reduce energy demand.

- Provide conductive/inductive electric vehicle charging station and signage prohibiting parking for non-electric vehicles within designated spaces within non-residential developments.
- Provide vanpool parking only spaces and preferential parking for carpools to accommodate carpools and vanpools in employment areas (e.g. community commercial, business-professional uses)
- All truck loading and unloading docks shall be equipped with one 110/208 volt power outlet for every two-dock doors. Signs shall be posted stating "Diesel trucks are prohibited from idling more than five minutes and trucks requiring auxiliary power shall connect to the 110/208-vot outlets to run auxiliary equipment".
- Design streets to maximize pedestrian access to transit stops.
- Require site design to maximize access to transit lines, to accommodate bus travel, and to provide lighted shelters at transit access points.
- Develop the plan consistent with the higher residential densities (within approved residential density ranges of zone) provided around the village nodes and transit corridors.
- Participate in Roseville Electric incentive programs for energy-efficient development where feasible if available at the time of construction.
- Ten percent of the residential units shall be designated as low to very-low income residential units.
- A pedestrian access network shall link areas of the project site with other land uses.
- Electric landscape maintenance equipment shall be utilized to the extent feasible on parks and public/quasi-public lands.
- Design buildings to meet the 2013 Title 24 Energy Efficiency Standards (which is a 25% reduction below 2010 Title 24 Energy Efficiency Standards).
- Ensure that all area lighting installed on the site shall be considered high efficiency lighting. All public street lighting shall meet the lighting standards of Roseville Electric at the time of construction.
- Utilize reclaimed water for irrigation of all non-single family areas within the project site, including the school, parks, paseos, roadway landscaping and commercial landscaping.
- Reduce the area of turf allowed consistent with the City's Water Efficient Landscape Ordinance and the Water Conservation Strategy.
- Install water efficient landscape irrigation systems at all public land uses.

Measures for Residential Units:

- Require electrical outlets be installed on the exterior walls of both the front and back of residences to promote the use of electric landscape maintenance equipment.
- Require every garage of each single family home to be considered "Electric Vehicle Ready". This by definition is not limited to, but includes a conduit raceway to a spare electric box in the garage that is sized for a future minimum 50-amp 220v outlet. A 220v breaker space must be available in the electrical panel.
- Require installation of a gas outlet in the rear of residential buildings for use of outdoor cooking appliances, such as gas burning barbeques.
- Require installation of low NO_x hot water heaters (beyond District Rule 246 requirements)
- Prior to approval of Tentative Maps: provide notice to homebuyers through CC&Rs or other mechanisms to inform them that only gas fireplaces are permitted.

- The applicant shall ensure that builders offer only energy efficient appliances for installation in residential units, including Energy Star refrigerators, clothes washers, dishwashers, and ceiling fans.
- Prior to building permit approval, the applicant shall show, on the plans submitted to the Building Department, provisions for construction of new residences, and where natural gas is available, the installation of a gas outlet for use with outdoor cooking appliances, such as a gas barbecue or outdoor recreational fire pits.
