

## Inputting Drought Settings for RainMachine Controllers

- Open up the RainMachine App on your phone and find your device (please note that for this guide we are using the RainMachine’s demo unit. You should select your device from the list, NOT a demo unit.). On the main app screen tap the third icon to go to schedules and tap your schedule and then tap edit (you may have to do this multiples times if you have multiple schedules).

- On the edit screen tap “Frequency” to adjust watering days and tap “Selected Watering Days” to select allowed watering days for drought Restrictions.

- Back on the edit screen for the schedules, this is a good time to check to see if your schedule is both adjusting for the weather and properly cycle soaking as these are imperative aspects watering properly in Roseville.
- Tap “Advanced Settings”, make sure “Weather-Adaptive Watering” is selected as well as “Cycle Soak” being set to “Auto”.
